Job Spec: QA Test Analyst

Details:

Location: Leatherhead
Division: Web Performance
Team: Real User Monitoring team
Reports to: Product/Development Manager

The role:

We are seeking a QA Engineer/Test Analyst with experience of testing websites or analytics portals to join a team working on a new product offering. The role is focused on the manual and automated testing of web based services that will be pushed to a customer-facing production environment. The role will be office-based with occasional trips to meet with developers.

Activities and responsibilities:

You will be working in a dedicated product team providing all QA support for the project working closely with developers in an Agile team. This is an opportunity to work in a fun and challenging environment, using the very latest technologies to deliver web based applications from both dedicated private infrastructure as well as the Cloud.

Required competencies (in order of importance):

- Functional and user acceptance testing scenario design and completion
- Automated website testing (ideally Selenium)
- Database use (ideally MySQL) with SQL skills
- Experience with ticketing and workflow systems (ideally Jira)
- Experience with Amazon Web Services

The person:

Experience (in order of importance):

- Delivered functional and user acceptance testing of complex web applications
- Produced manual and automated (preferably with Selenium) test cases
- Working knowledge of at least one OO programming language (such as C#, Java)
- Performed cross browser functional testing
- Completed performance testing using any of the load testing services available such as NCC Group Load Testing, Loadrunner, Browsermob, JMeter

Qualities:

- A passion for quality assurance
- Good eye for detail
- Excellent interpersonal and verbal and written communication skills
- A proactive and energetic person with a desire to contribute collaboratively to the development of the team and the company

About NCC Group

NCC Group is a leading global information assurance firm, providing freedom from doubt that all critical material is available, protected, and operating as it should be at all times. Information assurance is delivered through escrow and verification, security testing, audit and compliance, software testing and web performance services.

About NCC Group Web Performance

NCC Group Web Performance division is the UK's leading website performance testing company, based in Leatherhead, Surrey. We provide independent performance monitoring and load testing services to over 500 blue chip clients, protecting over £5 billion of online revenues and testing over three million web pages every day. The real-time information we provide allows our customers to detect performance problems and respond quickly to prevent future slowdowns or outages.

We test website performance for many of the UK's largest companies, including many well-known brands and businesses such as; Aviva, Auto Trader, Marks & Spencer, John Lewis, TUI, Tesco and Betfair.
